

Which side is more tree-like?

Syntax side lower in 18 of 22 structures, phonology side lower in 4.

Dotted line: $p = 0.05$.

● Syntax side ● Phonology side

Span-placement p-value (low: fewer families than the same spans placed at random)

A side with few spans can hardly give fewer families than chance, so its p-value is near 1 whatever its arrangement.
